

MATERIAL WAREHOUSE

At T4T we rescue wonderful, clean, safe, inspiring items that local businesses discard in abundance, and make them available to shoppers. Since we first opened our doors in 2004, T4T has diverted over 300,000 pounds of materials from local landfills. Everyone is welcome to visit the T4T warehouse. Memberships cost \$100 for 100 pounds worth of materials that you can purchase by yourself or with a school/group. If you just need a small quantity and don't want a membership, you can pay \$2.00 per pound plus tax.

T4T RESCUES CLEAN, SAFE, INSPIRING items that local businesses discard.

\$100 = 100 lbs
material membership

VISIT
T4T

Shop, lesson plan, volunteer, and on Sundays bring a young inventor & participate in our hands-on family workshops.

who we are...

T4T EXISTS AT THE INTERSECTION OF CREATIVITY AND SUSTAINABILITY.

We are passionate about hands-on learning and we believe that curiosity and experimentation are the core of critical thinking and ingenuity.

what we do...

T4T rescues clean and safe materials that local manufacturers discard, and we transform them into inspiration.

Our open-ended materials are utilized in classrooms, after school programs, and all over LA to ignite imagination, and support in-depth learning. T4T's Material Warehouse is a community hub for teachers, administrators, universities, non-profits & businesses. Together we are developing innovative ways to facilitate next generation learning in science & engineering.

hands-on

SCIENCE, ENGINEERING, & INVENTION...

NASA's B.E.S.T.

Beginning Engineering Science Technology

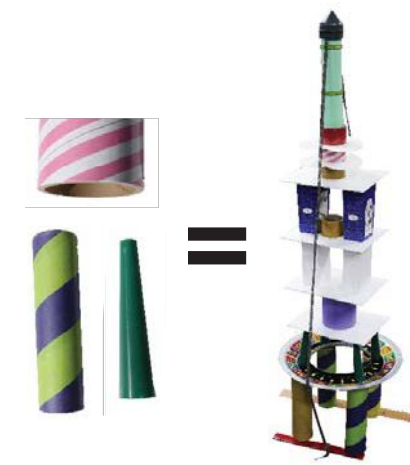

NASA's B.E.S.T. is a collection of 9 space themed engineering challenges, designed for students in grades K-8, with 3 age appropriate levels of curriculum. Activity Guides are free and available online at www.nasa.gov/audience/foreducators/best

NASA asked T4T to design material carts with a variety of tools and open ended materials that would support the B.E.S.T. curriculum. More than 20,000 students explored engineering in 2013-14, thanks to our collaboration with teachers from LAUSD and Compton Unified & after school providers like LAUSD's Beyond the Bell, Inglewood's LEAP, Lawndale RAP, and the Boys and Girls Club.

T4T offers a variety of school, community, and warehouse based hands-on experiences that challenge students and families to dive into engineering, invention and collaboration. Ideal for Science Fairs, STEM Nights, Earth Day's, etc. T4T will bring its van full of materials to your school or organization and facilitate one of our engaging programs. We also host engineering experiences at T4T and offer field trips to our warehouse.

COMMUNITY events & SCHOOL assemblies

"THE ULTIMATE RECYCLING INVENTION" engineering challenge

"ECO-VEHICLES" car design

"REACH FOR THE SKY" tower engineering

CLASSROOM Collaborations

& professional development workshops
